

The A-Spec Group announces the inclusion of 2 West Australian State Government Agencies.

PRESS ANNOUNCEMENT FOR IMMEDIATE RELEASE

The A-Spec Group welcomes 2 new Western Australian State Government Agencies: Main Roads (*MRWA*) and the Department of Water (*DoW*) to the consortium. The agencies will use **D-Spec** which outlines the specifications for digital files containing drainage pipe, pit, property connections and Water Sensitive Urban Design Elements (**WSUD**). This specification is available for download from the D-Spec website (www.dspeg.com.au).

Main Roads have already begun using D-Spec as part of their maintenance contract with Downer EDI Works asset management arm – AXIM. AXIM have modified their hand held devices so that during drainage inspections, D-Spec data can be verified and or gathered during the course of the inspection.

The Department of Water have just completed a comparison study of the D-Spec specification and their requirements. The few differences will be included in the latest version of D-Spec due for release in January 2010.
